

Spireon integrates with PSI TireView TPMS

By Trucks, Parts, Service Staff

February 25, 2020

Spireon has announced an integration of its FleetLocate trailer management solution with the Pressure Systems International (PSI) TireView tire pressure monitoring system (TPMS).

The partnership builds upon Spireon's Intelligent Trailer Management (ITM) platform to equip customers with actionable intelligence needed to maximize ROI, the company says.

“Tire pressure monitoring systems help carriers extend tire life, reduce uneven wear from under-inflation, decrease maintenance costs and prevent tire-related CSA violations,” says Roni Taylor, senior vice president of strategy and business development, Spireon. “Spireon's integration with PSI TireView TPMS is an important addition to the ITM platform as it gives customers a comprehensive view of tire health where they manage their entire trailer ecosystem—FleetLocate.”

Spireon says the FleetLocate/TireView TPMS integration makes it easier for carriers to see tire pressure, temperature and status for all system-equipped trailers; identify leakage and get ahead of repairs before a failure; and create real-time alerts to provide notification of issues.

“It's been great to work side-by-side with Spireon's product management and engineering teams to bring this seamless integration to market,” says Jim Sharkey, PSI vice president of global sales and marketing. “Our second integration with Spireon, now you can tie our ATIS in with TPMS all within FleetLocate.”
